Vision
A world in which people with celiac disease can live healthy lives free from fear of gluten exposure—a world Beyond Celiac.

Mission
Beyond Celiac unites with patients and partners to drive diagnosis, advance research and accelerate the discovery of new treatments and a cure.

ON THE COVER: World renowned opera tenor Arturo Chacón-Cruz, his wife Venetia and son Arturo Jr. In pursuit of a brighter future in which people with celiac disease can eat without fear and live life to the fullest, Arturo has signed on to be an official spokesman of Beyond Celiac. Both he and his son have celiac disease, so he knows firsthand the challenges of living with it and shares his voice for our community to raise awareness and drive research. www.BeyondCeliac.org/Arturo
We are pleased to bring you an update on the latest work we are doing at Beyond Celiac—work that is only possible because of your consistent generosity. This is an exciting time for research about celiac disease. Promising clinical trials are already underway. At last we can see a path emerging to treatments and a cure for celiac disease, and we are pouring all of our efforts into making that dream a reality. Our Science Plan, developed in collaboration with top scientists in the field, is the road map for how we will work to accelerate research toward these goals.

To fund that critical research, we are doing more in 2019: More 5K events around the country, more opportunities for volunteer engagement, more events and science updates, more functionality and flexibility for our patient database. We are counting on your support again as well, and we look forward to talking with you about ways you can help.

We work with passion at Beyond Celiac. All of us are in this fight together—our staff, our Board, our Scientific Advisory Council and other advisory groups, our community, and other stakeholders—until we achieve a future Beyond Celiac. With your help, we can and we will!

With our sincere thanks,
Alan Ehrlich, MD, Board Chair
Alice Bast, CEO
Pathway To Treatments And A Cure

Our mission has evolved to one of advancing the science of celiac disease because we firmly believe that with a strategic approach to funding focused research, an effective treatment or cure could be possible within the next 15 years.

To accomplish that goal, we are laser-focused and addressing the many barriers that exist:

**Barriers to a Cure for Celiac Disease**
- Celiac disease is poorly understood by the medical community
- The serious nature of the disease is underappreciated
- Too many people remain undiagnosed
- There is an assumption that the gluten-free diet is enough
- There is a lack of funding and strategic focus for research
- There is limited support for early career scholars/researchers, hindering progress

**OUR PLAN**

The large, diverse celiac disease community continues to suffer from high daily burdens in coping with the disease, and we need treatments and a cure. Beyond Celiac has crafted its science plan to change the future for the 1% of the population living with this serious genetic autoimmune disorder.

- **Patient Database:** We have built—and continue to expand—a patient database called Go Beyond Celiac. With thousands of participants already enrolled, this rapidly expanding group has indicated strong willingness to participate in research and clinical trials and to provide data that scientists need to make progress on a cure.

- **Chief Scientific Officer:** We have created a science department led by a Chief Scientific Officer, Marie Robert, MD, to determine the highest and best use of our resources in accelerating new treatments for people with celiac disease. We are focused on clinical advancements that will directly benefit our community.

- **Scientific Advisory Council:** Our new Scientific Advisory Council (SAC) was created as a first step towards accelerating research and a cure for celiac disease. The SAC is comprised of members [see page 7] who have a broad span of expertise that includes celiac disease, immunology and drug development. They
are internationally recognized physicians and scientists in both celiac disease and related non-celiac disease fields of study.

The SAC will develop the strategic research agenda and assist Dr. Robert in developing the Beyond Celiac research grant program, with input into grant fund allocation, creating requests for and judging grant applications and evaluating research progress.

This important team will leverage current knowledge in celiac disease research, bridge critical gaps in the treatment development process, capitalize on synergies from discoveries made in other genetic and immune diseases and encourage the next generation of talented young investigators who will lead celiac disease research in the future.

- **Funding for Research:**
Because celiac disease research is underfunded, we have crafted a plan and begun to offer grants, outlined on the next page.

Alice Bast, Beyond Celiac CEO, Marisa Gallant Stahl, MD, of Children’s Hospital Colorado, and Marie Robert, MD, Beyond Celiac CSO. Dr. Stahl is the recipient of the Society for the Study of Celiac Disease - Beyond Celiac Early Career Grant Award.
RESEARCH FUNDING

There are multiple pathways on the horizon for drug research, discovery and development. We know that the first need in achieving a cure for celiac disease is adequate funding. A second related need is equally important: We need to maintain our focus on research that is practical and patient-centric. We have designed our scientific plan accordingly.

As a lean organization, we carefully target our efforts to advocate for and accelerate the best ideas in celiac disease research. We steward carefully the money you entrust to us, supporting the approaches that are most promising for patients, as we work towards a cure.

Our research funding will be directed in two primary ways:

INVESTIGATOR GRANTS: BEST AND BRIGHTEST

1. Early Career Investigator
The historic lack of funding in celiac disease has resulted in a limited number of researchers currently studying the disease. In early 2019, we funded the Society for the Study of Celiac Disease-Beyond Celiac Early Career Investigator grant to a pediatric gastroenterologist at Children's Hospital Colorado, Marisa Gallant Stahl, MD. Dr. Stahl will receive $75,000 for the next two years for a study to evaluate the impact of celiac disease on the health and quality of life of children who are identified through a mass screening program.
Total: $125,000

2. Established Investigator
Next to be awarded in 2019 is the Established Investigator Grant. This grant encourages the most successful scientists to continue to study celiac disease or, if working in a related field, turn their focus to celiac disease, helping to keep top scientists committed to long-term celiac disease research. Over time, these grants will lead to more researchers dedicating their careers to studying celiac disease and to finding better treatments and a cure. This is a three-year grant funded at $100,000 per year (plus 8% indirect costs).
Total: $324,000

3. Innovative Research Grant: High-Potential Discovery Areas
We will provide grants to help scientists collect the preliminary data needed to begin answering major questions around celiac disease that could lead to breakthroughs for larger scale research or clinical trials. In 2019, Beyond Celiac will provide a grant to support a pilot and feasibility study. This is a two-year grant funded at $60,000 per year (plus 8% indirect costs).
Total: $129,600
As we support the ideas that offer the greatest promise, we will actively monitor and adjust our strategy as we go. This is our passion and our life’s work. With your support, Beyond Celiac will be the catalyst for the next wave of practical celiac disease research efforts.

Beyond Celiac hosted its 2nd Annual Celiac Disease Research Symposium on October 10, 2018. World renowned celiac disease experts joined us in Philadelphia to discuss the very latest in celiac disease research. The panel featured some of the world’s most prominent experts on celiac disease:

**Marie Robert, MD**
Beyond Celiac CSO and Professor of Pathology, Yale University (Moderator)

**Ciarán P. Kelly, MD**
Director, Celiac Center and Director, Gastroenterology Fellowship Training, Beth Israel Deaconess Medical Center; Professor of Medicine, Harvard Medical School, and member of the Beyond Celiac Board of Directors

**Maureen M. Leonard, MD MMSc**
Clinical Director of the Center for Celiac Research and Treatment at MassGeneral Hospital for Children and Instructor of Pediatrics at Harvard Medical School

**Stephen D. Miller, PhD**
Judy E. Gugenheim Research Professor of Microbiology-Immunology and Director of the Interdepartmental Immunobiology Center at Northwestern University Feinberg School of Medicine

Antigen-specific immunotherapy, a treatment aimed at restoring tolerance to gluten while leaving the rest of the immune system unaffected, and the intestinal microbiome, the collection of bacteria, fungi and microbes in the digestive system, were the focus of discussion in this presentation, which was webcast live internationally.

Panelists explored how our gut microbiome and immune system function can lead to answers to two of the most pressing questions about celiac disease – how does it start and how can we stop it?

**Here are the five top takeaways from the symposium:**

- Immunotherapy that uses nanoparticles to specifically target the harmful response to gluten without making celiac disease patients susceptible to infections and cancer could be the key to ending symptoms and intestinal damage.
- Though in the early stages, immunotherapy could provide celiac disease patients protection and allow them to eat a diet containing gluten.
• The gut microbiome, which is being studied in infants at high risk for celiac disease, could hold the answer to why some people with the genes associated with celiac disease develop the condition while others do not.
• If researchers can identify shifts in the microbiome at the precise moment that celiac disease is activated, they might be able to intervene and prevent celiac disease from developing.
• Researchers have a better understanding of the kind of evidence they need to finally get Food and Drug Administration approval of a drug to treat celiac disease. Studies in recent years have moved from observing the disease in patients to working on interventional treatments. Additionally, pharmaceutical companies now have an interest in finding a drug or vaccine.

Symposium guest visits with Beyond Celiac Board Member Ritu Verma, MD, and her daughter Priyanka Chugh.

Guests from Takeda Pharmaceuticals attended the 2nd Annual Beyond Celiac Symposium. Pictured: Beyond Celiac Assistant Director of Digital Media Kim Pacini; Takeda Head of Global Outcomes Research & Epidemiology Michele Luo; Beyond Celiac CEO Alice Bast; Takeda Director, Lead in Gastroenterology, Global Outcomes Research Song Wang; Takeda Executive Medical Science Liaison Jesse Krupocin, PharmD

Recordings of this and other Beyond Celiac symposiums are available at www.BeyondCeliac.org/symposiums
Beyond Celiac culminated its commemoration of its 15th anniversary on October 11, 2018 at the Pennsylvania Academy of Fine Arts. The honoree was Joseph H. Jacovini, Esq, of Dilworth Paxson LLP. Carole Haas Gravagno, Barbara Powers and Wendi Wasik shared the Beyond Celiac story over the years. Top chefs from Constellation Catering Group delighted the crowd with gluten-free delectables and Chef Monica Glass, long-time supporter and person with celiac disease, was featured.
David Pudlin, Helen Pudlin, Beyond Celiac board member Jennifer Snyder and Beyond Celiac CEO Alice Bast

Jamie & David Yadgaroff

Denise Fike enlivened the Go Beyond Celiac Gala with artful renderings of the guests.
Celebrating 15 Years of Achievement
2003-2018

The Samuel Gee Award, 2018
Joseph H. Jacovini, Esq.

Provided wisdom and guidance to Beyond Celiac
Strategic planning and negotiating nonprofit waters
Continues to be a pillar of the Philadelphia community
Leads by example

A loving family man
Wife Anne,
Children, and
Grandchildren

Thank You, Joe!

Jillian Hunt
Chair at Beyond Celiac

Daughter Nadelyn, now 9
- a difficult baby
- failed to thrive
- circling hands, feet
- distended belly

Later in school - gymnastics...
Endoscopies showed reflux

Finally: Gold standard diagnosis...
3rd endoscopy
Result - from pediatric GI doctor (who has celiac disease)
Positive for celiac disease
Celebrate finally having answers...
... and educating those around us!

Goal for next year:
Raise at least $1,000,000
For research
We can. We will!!
... with your help.
Thank you!

October 11, 2018

Thank You, Joe!

StoryVine Studio
In 2018 Beyond Celiac combined $1,400,187 in new operational revenue and funds raised with $399,069 of funding from investments, cash and prior-year surplus to cover expenses of $1,799,256. We thank our generous donors and sponsors for supporting our aggressive research agenda geared to accelerate the discovery of new treatments and a cure.

Beyond Celiac earned the top level platinum status on GuideStar and 4-Star rating on Charity Navigator. Both organizations are major information sources about non-profits used by donors and potential donors to review the financial health of organizations.
2019 is the biggest year yet.

While it’s important to appreciate our accomplishments of 2018, Beyond Celiac is, as always, looking to the future.

**In 2019, we invite you to join Beyond Celiac to:**

**DIRECTLY FUND RESEARCH**

Our first research grant, the Society for the Study of Celiac Disease-Beyond Celiac Early Career Investigator grant, was awarded in early 2019 to Marisa Gallant Stahl, MD. She was chosen from a competitive field of candidates who are focusing their research on celiac disease.

Two additional research grants will be awarded in 2019, the Established Investigator Grant and the Innovative Research Grant (see a full description in Our Science Plan on page 6). We are actively fundraising to make more grants possible.

**ADD YOUR VOICE**

We are expanding the Go Beyond Celiac patient platform and database and launching a first-of-its kind smart phone app to engage the celiac disease community and to collect patient stories to enable researchers to pursue treatments and a cure. Go Beyond Celiac will also help speed recruitment for clinical trials and research studies by identifying patients who meet the study’s criteria and informing them of the trial.

Visit [Go.BeyondCeliac.org](http://Go.BeyondCeliac.org) to sign up, get the new app, and complete the surveys.
RAISE AWARENESS ABOUT CELIAC DISEASE

Our voices need to be heard. To reach new audiences, we are partnering with world renowned opera tenor Arturo Chacón-Cruz. Arturo, recognized on May 5th at the Plácido Domingo Awards in Los Angeles, shared his story, in part, to fight for his young son who also struggles with celiac disease.

To learn more about Arturo, visit: www.BeyondCeliac.org/arturo

STAY INFORMED

The 3rd Annual Beyond Celiac Research Symposium was held in May this year. Beyond Celiac CSO Marie Robert, MD, moderated an expert panel of speakers, including Joseph Murray, MD, of the Mayo Clinic, Sonia Kupfer, MD, of University of Chicago, and Linda S. Deal, MS, of Pfizer. Topics focused on the celiac disease drug pipeline, non-celiac gluten sensitivity and the importance of patient engagement in the drug development process.

Visit www.beyondceliac.org/symposium to access the webcast.

And stay tuned for other webcast opportunities, including the 2019 Beyond Celiac Research Summit. In 2015, Beyond Celiac held its first groundbreaking Research Summit, establishing the plan to shift the focus of the organization to research for treatment options and a cure. At the 2019 Summit, Beyond Celiac will bring together key stakeholders to discuss how to overcome the barriers to bringing a new treatment to market. Participants will include celiac disease researchers and physicians, the FDA, insurance company representatives, patients, and international advocacy groups.
CELEBRATE AND SUPPORT
Join us at our 2019 Go Beyond Celiac Gala & Concert featuring Arturo Chacón-Cruz on October 24 at the Kimmel Center in Philadelphia.

STEP BEYOND CELIAC
Beyond Celiac is expanding Step Beyond Celiac. So successful in Kansas City in 2017 and 2018, the Step Beyond Celiac 5K series now also includes Dallas and Philadelphia. These fun family-friendly runs/walks, plus Virtual Step Beyond Celiac activities are an opportunity for our community to actively support our grassroots efforts to drive research for treatments and a cure.

STEPPING (ABOVE AND) BEYOND CELIAC
Many thanks to our 2018 KC5K fundraising teams, donors, sponsors and volunteers for making the 2nd annual Step Beyond Celiac event in Kansas City a resounding success!
